

**ABSTRACT OF THE DISCLOSURE**

5           A rack device with a height adjustable depending on the cargo  
carried and the size of the vehicle used. The rack device includes a  
pair of end portions each comprising a first bar and a second bar  
coupled to and extending upwardly away from the first bar. A third  
bar is coupled to and extends away from the second bar. A fourth  
10 bar is coupled to and extends upwardly away from the third bar. A  
fifth bar is removably coupled to and extends between the second  
bars of each of the end portions. A sixth bar is removably coupled  
to and extends between the first bar of each of the end portions.
